

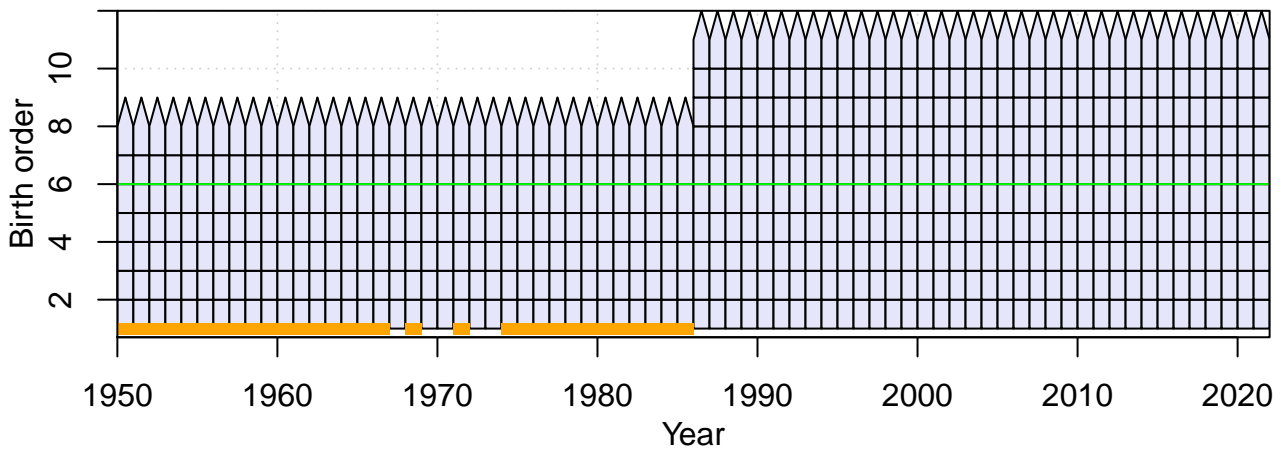

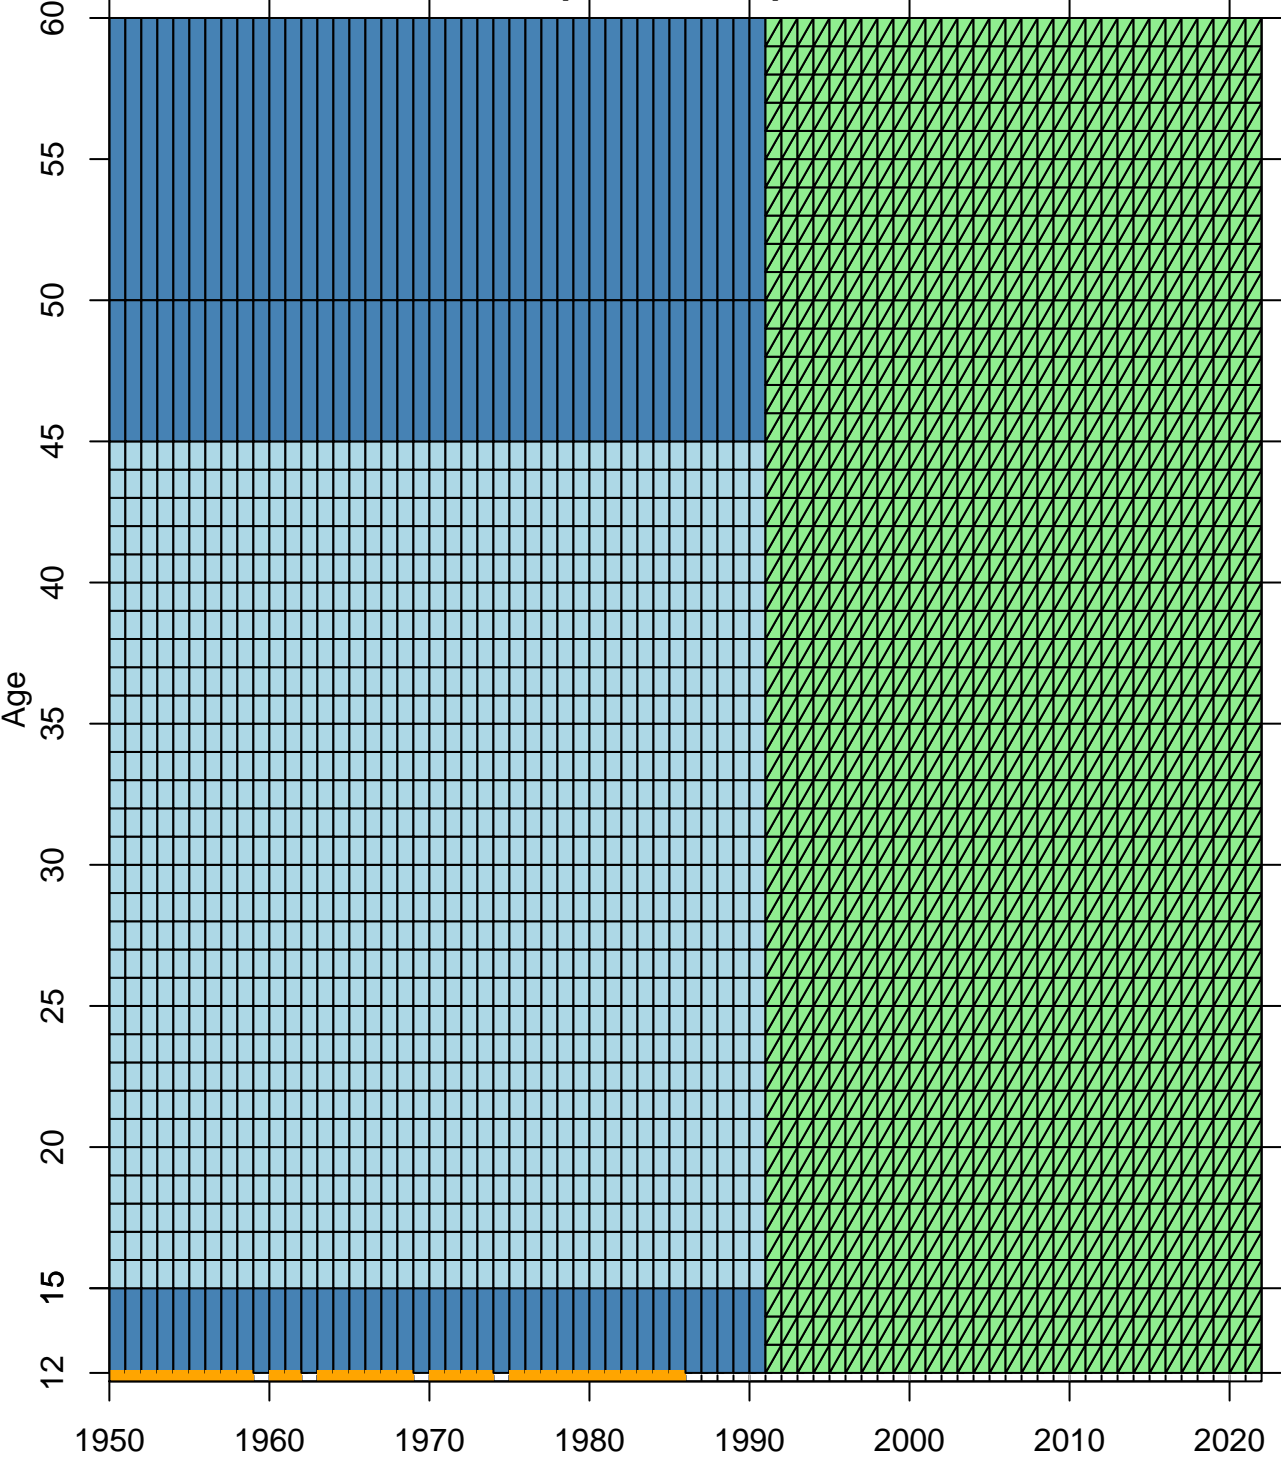

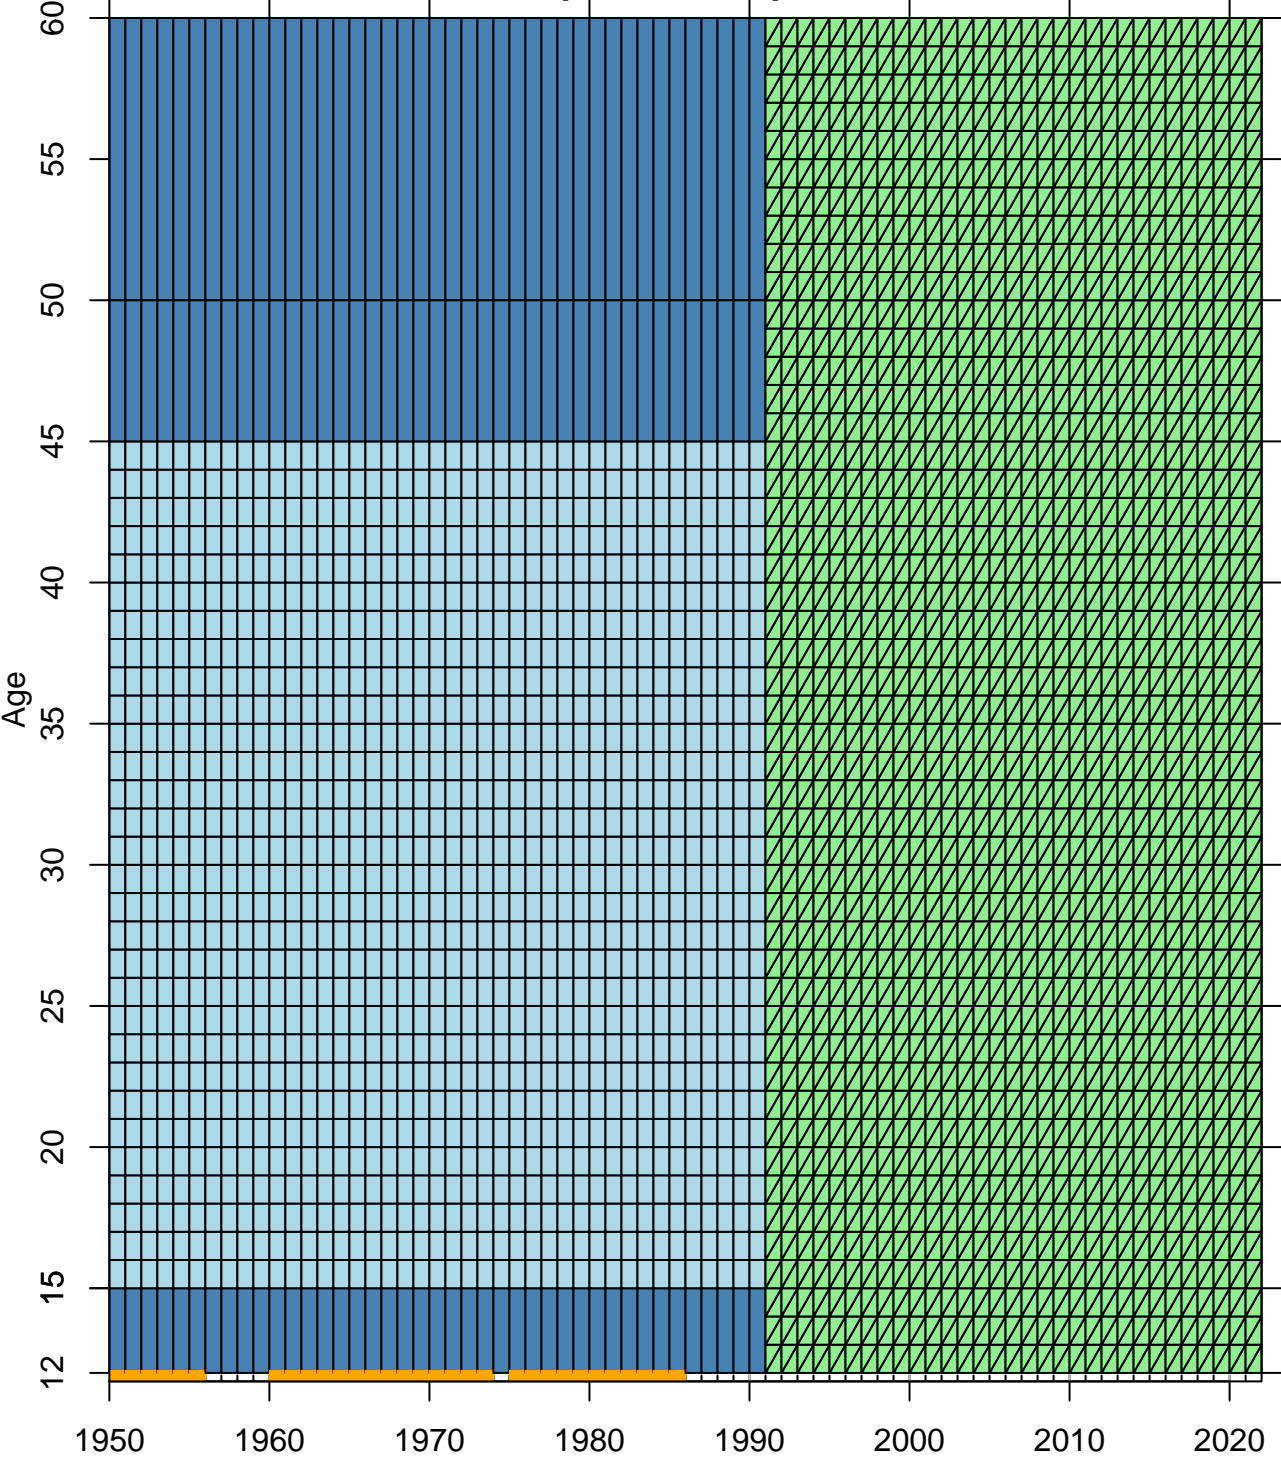

Figure 1 consists of two panels. The top panel is a heatmap showing the evolution of the birth order distribution across age groups (12 to 60) and years (1950 to 2020). The color scale represents birth order, with blue for 1st, green for 2nd, yellow for 3rd, orange for 4th, red for 5th, purple for 6th, brown for 7th, pink for 8th, light blue for 9th, light green for 10th, light yellow for 11th, and light pink for 12th. The bottom panel is a line plot showing the proportion of each birth order (1 to 12) over time (1950 to 2020). The y-axis represents Birth order (1 to 12) and the x-axis represents Year (1950 to 2020). The plot shows that the proportion of 1st birth order (blue) decreases over time, while the proportion of 2nd birth order (green) increases. The proportion of 3rd birth order (yellow) remains relatively stable. The proportion of 4th birth order (orange) shows a slight increase in the early 1950s. The proportion of 5th birth order (red) shows a slight increase in the early 1950s. The proportion of 6th birth order (purple) shows a slight increase in the early 1950s. The proportion of 7th birth order (brown) shows a slight increase in the early 1950s. The proportion of 8th birth order (pink) shows a slight increase in the early 1950s. The proportion of 9th birth order (light blue) shows a slight increase in the early 1950s. The proportion of 10th birth order (light green) shows a slight increase in the early 1950s. The proportion of 11th birth order (light yellow) shows a slight increase in the early 1950s. The proportion of 12th birth order (light pink) shows a slight increase in the early 1950s.
